

Numerical Examples in Heath (Paperback)

Filesize: 2.98 MB

Reviews

The most effective ebook i possibly go through. I am quite late in start reading this one, but better then never. Its been designed in an extremely basic way and it is just after i finished reading this ebook by which basically transformed me, modify the way i believe.
(Giovanny Rowe)

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1885 Excerpt: .final pressure $20 = 20x = 19-12$ centimetres. 20-87 But the atmospheric pressure balances the pressure of this air, the pressure of the vapour, and the column of mercury in the tube; hence, if x be the vapour pressure we have $+ 55-13 + 19-12 = 76. x = 175$ centimetre. (7.) A similar experiment was then performed with ether vapour. The air initially occupied 18 centimetres of the tube and the height of the mercury column was 58 centimetres, the laboratory barometer standing at 75 centimetres. On introducing a little ether the height of the mercury column became 257 centimetres. What was the pressure of the ether vapour? Answer. 43-217 centimetres. (8.) A long barometer tube of uniform bore which is inverted over mercury contains at its upper part some dry air which occupies a length of 15 centimetres. The height of the mercury column in the tube is 50 centimetres, the barometric pressure being 74-5 centimetres. A little alcohol is passed up into the tube, and it is known that at the temperature of the experiment the maximum pressure of alcohol vapour is 7-85 centimetres. What should be the height of the mercury column in the tube? Let x be the depression of the mercury column in centimetres. Then by the method of Example 6 we find that the final pressure of the air is $24-5x$ centimetres, and the height of the mercury column is $50-x$ centimetres. Hence we have $24-5x = 15 + 7-85 + Tfr...$
