

Time and Memory: A Primer on the Scientific Mysticism of Consciousness (Paperback)

By Stephen Earle Robbins

Createspace, United States, 2012. Paperback. Book Condition: New. 228 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.A dark cloud hanging over all spiritual thought today is the view that findings in modern science prove that all spiritual experience is simply generated by the brain. This view is only a natural reflection of the concept that all consciousness, to include our visual experience of the external world, is equally simply so brain-generated. This book challenges the roots of this view in current conceptions in cognitive science, neuroscience, neural network theory and artificial intelligence, robotics, consciousness theory, evolutionary theory and physics. In consciousness theory, this is the yet unresolved hard problem and basic misconceptions inherent in the classical model of space and time in which this problem rests. In cognitive science and artificial intelligence, this is the problem of accounting for the fundamental cognitive operation of analogy and the highly related, yet nearly abandoned problem of commonsense knowledge with its hitherto unrealized impact on the theory of evolution. In physics, this is a deeply flawed interpretation of relativity and its concepts of time. An alternative model of mind is described here based in the prescient theory...
