It is usual practice, however, to use the theoretical length as the unsupported length, this method giving results slightly on the side of safety; it is to be recommended in that it assists in caring for the small secondary stresses which exist due to the practical method of manufacture. These secondary stresses are not usually provided for in any other way. The minimum angle usually specified is 2 X 2 X although some designers use smaller angles of thinner metal. In the best trusses, all members except the hanger at the centre, which carries no appreciable load, consist of two angles placed back to back with sufficient distance between them to permit of the insertion of the gusset connecting plates at the joints. For very light members, some designers use single...
